Brad,

We reviewed the remarks that was forwarded to you. It appears that there are various approaches within your agency for deriving a cleanup or risk criteria.

What we would like to do next week is to discuss the data products that we could produce that would assist your agency in determining a final cleanup or action level.

Please let us know when it is convenient for us to call you or you call us.

Could you also have on hand with you a copy of the aerial radiological survey report from the Navajo Uranium Mines that was performed between 1994-1999?

If you have any questions, please let me know.
